

Scale99.

The complete visual system behind scale99.com — every token, type size, spacing value, and component convention, read directly from the source rather than described from memory. This page is built in the system it documents.

Next.js 16 · App Router

Tailwind v4 · CSS-based theming

Dark-first · single theme

11 routes

FOUNDATIONS

Color

Seven tokens, no more. They're declared as CSS custom properties on `:root` and exposed to Tailwind through `@theme inline`, so `bg-surface` and `text-accent` resolve from the same source of truth. There is no light palette — the brand commits to dark.

Ground

#0A0A0A

Page background. Near-black, not pure — keeps the orange from vibrating.

--background · bg-background

Surface

#141414

Raised planes: cards, alternating section bands, the nav dropdown.

--surface · bg-surface

Accent

#FF6A00

The single brand color. Primary buttons, eyebrows, arrows, active states, the logo period.

6.90:1 on ground

--accent · text-accent · bg-accent

Foreground

#FFFFFF

Headings and primary text. Pure white against the near-black ground.

19.80:1 on ground

--foreground · text-foreground

Muted

#9A9A9A

Body copy, captions, inactive nav. Carries most of the running text.

7.04:1 on ground

--muted-foreground

Hairline

RGBA(255,255,255,.12)

Every divider and card edge. Structure is drawn with light, never with a lighter fill.

--border · border-white/10

Aa

On-accent

#0A0A0A

Text sitting on an accent fill. Never white on orange — that lands at 2.87:1 and fails WCAG AA.

--accent-foreground

Border opacity is a four-step scale, not a free value

`white/10` is the default and does almost all the work (33 uses). `white/15` is reserved for pills and small inset chips, `white/20-30` for the secondary button and hero stat rule, and `accent/40` is the hover state on any interactive card. Introducing a fifth value is how a system starts to drift.

FOUNDATIONS

Typography

Two families do the work: Sora for anything structural, Inter for everything read. Sora's tight apertures and near-geometric caps hold up at display sizes where Inter would read generically; Inter stays legible at the 14px that carries most of the site's copy.

Hero
text-7xl · 72px
Sora 700 ·
-0.03em

No one gets your business better than us.

Page title
text-6xl · 60px
Sora 600 ·
-0.02em

Built for real businesses.

Section
text-5xl · 48px
Sora 600

Everything under one roof.

Sub-section
text-3xl · 30px
Sora 600

How it played out.

Card title text-2xl / xl · 24 / 20px Sora 600	Automation Tools
Lede text-lg · 18px Inter 400 · muted	We engineer the systems, experiences, and momentum that move ambitious businesses forward.
Body text-sm · 14px Inter 400 · muted most used	CRM systems shaped around how your business actually sells, services, and retains clients — not the other way around.
Eyebrow 0.7rem · Inter 600 0.2em tracking · caps	WHERE TO START
Meta / label text-xs · 12px 0.18em tracking	TRUSTED BY TEAMS AT

One live bug: the mono face is declared but never loaded

--font-mono: 'IBM Plex Mono'

 is defined in the theme and

font-mono

 is used in three places — the services accordion numerals and the product-highlight indices. But the Google Fonts import in

globals.css

 requests only Inter and Sora, so those numerals silently fall back to the viewer's system monospace and render differently across machines.

Fix is one line: add

&family=IBM+Plex+Mono:wght@400;500

 to the existing import. This guide loads it, so the mono you see here is the intended face.

STRUCTURE

Layout & spacing

Everything lives in one centered column and every section breathes on the same two-step vertical rhythm. Content is center-aligned site-wide.

ROLE	VALUE	APPLIES TO
Container	max-w-5xl · 1024px	Every section, the nav, the footer — one width, no exceptions
Gutter	px-6 → lg:px-10	24px, 40px at ≥1024px
Section rhythm	py-28 lg:py-36	112px → 144px. The primary spacing unit

ROLE	VALUE	APPLIES TO
Secondary rhythm	<code>py-20 lg:py-28</code>	80px → 112px. Sub-sections inside a page
Compact band	<code>py-8</code>	32px. The trusted-by strip only
Card padding	<code>p-7</code> · <code>p-8</code>	28px standard, 32px for pull-quotes
Grid gap	<code>gap-5</code>	20px between all cards
Measure	<code>max-w-2xl</code> · 42rem	Running text, always with <code>mx-auto</code>

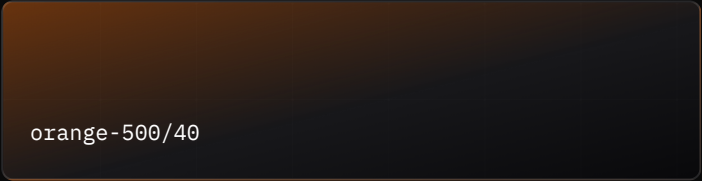

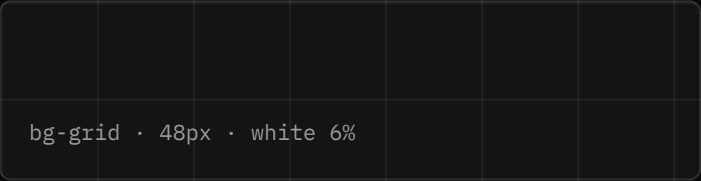

Breakpoints

Three only: `sm` 640px bumps display type, `md` 768px collapses card grids to two columns, `lg` 1024px is where the desktop nav appears and gutters widen. Grids step `1 → md:2 → lg:3`; the nav is the one component that switches wholesale at `lg`.

ATMOSPHERE

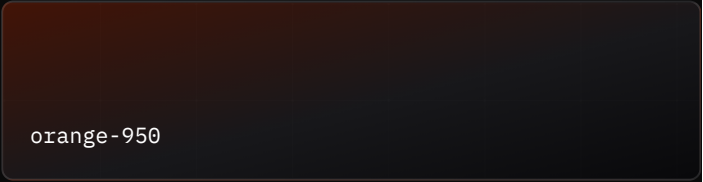

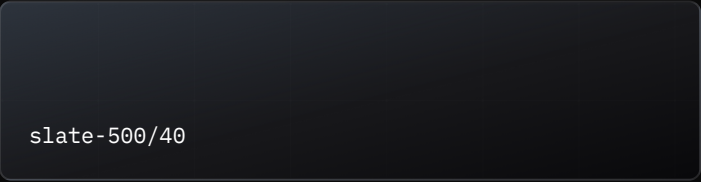

Surface & texture

Two devices give the dark ground depth without introducing new colors: a 48px blueprint grid, and a three-tone gradient set used behind industry and portfolio cards.

Rendered at `opacity-15` to `opacity-35` depending on what sits above it. Signature texture — behind the hero, the trusted-by band, and every gradient card.

Warm tone. Ties a card to the brand accent without filling it.

Cool tone. Alternates with warm so a grid never repeats two adjacent cards.

Deep tone. The quietest of the three; use where a card should recede.

All three gradients share one recipe

`bg-gradient-to-br from-{tone} via-zinc-900 to-zinc-950`, with a grid overlay at `opacity-20` that lifts to `opacity-40` on hover. Only the `from-` stop changes.

VOCABULARY

Components

Live examples. Hover the card and the buttons — the transitions are the real ones.

Products

Packaged solutions built the same way we build everything else.

rounded-md border border-white/10 bg-surface p-7 transition-colors hover:border-accent/40

Every card is the same card

Blog posts, products, teasers, partners, and highlights all use one recipe: rounded-md, border-white/10, bg-surface, p-7, and an accent/40 border on hover. Only the contents differ. Radius is rounded-md (6px) everywhere except pills, which are rounded-full.

BEHAVIOR

Motion

Motion is functional, never ambient. Nothing animates on load; everything animates on intent. Two properties carry almost all of it.

PATTERN	IMPLEMENTATION	WHERE
Color shift	transition-colors	32 uses — links, borders, card hover, nav
Lift	hover:-translate-y-0.5	Primary buttons only
Arrow nudge	group-hover:translate-x-1 / -x-2	Forward arrows; back-arrow nudges left
Chevron flip	group-hover:rotate-180 · 200ms	Nav dropdown, FAQ open state
